DETAILED ACTION

Response to Arguments

1. Examiner took notice of the remarks and amendments made by applicant filed on 5/26/05.

Response to Amendment

2. This office action is in response to Amendment filed on 5/26/05.
Claim 10 is amended.
Claims 6-9, and 11 are canceled.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Antony P. Ng on 6/13/05.

4. The application has been amended as follows:

Claim 10, after line 7 and before the text "and", insert --- **a voltage limiting circuit, coupled to said chalcogenide storage element, for ensuring that voltages across said chalcogenide storage element do not exceed a predetermined value during a read operation;---**

Claim 10, starting on line 11, delete "wherein said current-to-voltage circuit includes a p-channel transistor and an n-channel transistor"

Claim 10, after the text "control circuit" on line 10, insert: ---wherein said chalcogenide storage element is capable of changing from an amorphous phase to a crystalline phase, or vice versa, via an application of an appropriate amount of current; and wherein said flow-through current is 1 mA and 0.5 mA when said chalcogenide storage element is in said amorphous phase and said crystalline phase, respectively.

Claim 11, re-enter the original claim 11.

Claim 12, cancel.

Claim 13, cancel.

5. Claims 1-5, 10-11 and 14 are now pending.

Allowable Subject Matter

6. Claims 1-5, 10-11 and 14 are allowed.

7. Claims 1-5, 10-11 and 14 are considered allowable since prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations having in combination with other features, a chalcogenide storage element, a voltage limiting circuit, coupled to chalcogenide storage element, for ensuring that voltage across the chalcogenide storage element do not exceed a predetermined value during a read operation and a current-to-voltage converter circuit, coupled to the voltage limiting circuit, for converting or sensing a current pulse read from said chalcogenide storage element to a voltage pulse during said read operation, wherein the flow-through

current is 1 mA and 0.5 mA when the chalcogenide storage element is in the amorphous phase and said crystalline phase, respectively.
